Some of the highlights of this manual include: Guidance and training information for personnel with responsibilities for the acquisition, operation, and maintenance of industrial ventilation systems.

NEW! Now with both Imperial and Metric Values! Since its first edition in 1951, Industrial Ventilation: A Manual of Recommended Practice has been used by engineers and industrial hygienists to design and evaluate industrial ventilation systems. The 28th edition of this Manual continues this tradition. Renamed Industrial Ventilation: A Manual of Recommended Practice for Design (the Design Manual) in 2007, this new edition now includes metric table and problem solutions and addresses design aspects of industrial ventilation systems.

The second edition of Ventilation Control of the Work Environment incorporates changes in the field of industrial hygiene since the first edition was published in 1982. Integrating feedback from students and professionals, the new edition includes problems sets for each chapter and updated information on the modeling of exhaust ventilation systems, and thus assures the continuation of the book's role as the primary industry textbook. This revised text includes a large amount of material on HVAC systems, and has been updated to reflect the changes in the Ventilation Manual published by ACGIH. It uses both English and metric units, and each chapter concludes with a problem set.
