This book is primarily designed for engineering students studying the subject of Solar Energy. Because of the inclusion of a separate chapter on Other Renewable Energy Sources, the book is also well-suited for teaching the subject of Non-Conventional Energy Sources or Renewable Energy Sources. Solar thermal devices and systems are covered in detail. This makes the use of the book ideal for ...

McGraw-Hill Education

The principle stating that energy cannot be created or destroyed, although it can be changed from one form to another. The law of conservation of energy has been established by a multitude of meticulous measurements of gains and losses of all known forms of energy including mechanical, electrical, magnetic, thermal, chemical, and nuclear forms.
