This is the first book to analyze agrarian change in rural Bengal since the recent upsurge in agricultural growth which began in the mid-1980s. A distinguished cast of contributors explore the complex linkages between agricultural growth, agrarian social change, government policy and local level practice.

In the context of the current financial crisis, and at a time of deep global change, growing attention is paid to the global norms and ethical values that could underpin future global policy. Water is a key global resource. At the 3rd Marcelino Botin Foundation Water Workshop, held in Santander, Spain, June 12-14, 2007, the role of ethics in the de

Volume 3 of this series of the Handbooks in Economics follows on from the previous two volumes by focusing on the fundamental concepts of agricultural economics. The first part of the volume examines the developments in human resources and technology mastery. The second part follows on by considering the processes and impact of invention and innovation in this field. The effects of market forces are examined in the third part, and the volume concludes by analysing the economics of our changing natural resources, including the past effects of climate change. Overall this volume forms a comprehensive and accessible survey of the field of agricultural economics and is recommended reading for anyone with an interest, either academic or professional, in this area. *Part of the renowned Handbooks in Economics series *Contributors are leaders of their areas *International in scope and

comprehensive in coverage

This book considers the transformative impact of global trade and production networks on local economies, work and labour organization, and various forms and meanings of 'community'. It examines the socio-economic transformation in Asia and the restructuring of manufacturing industries, ports and the information technology sector.

Intensive use of groundwater has resolved the demand for drinking water and, through irrigation, has contributed to the eradication of malnourishment in many developing countries. The spectacular worldwide increase in groundwater use in the last decades, especially in arid and semi-arid regions, has been a silent revolution carried out by millions of small farmers. In some instances, groundwater abstraction has caused problems of quality degradation, excessive drawdown of groundwater levels, land subsidence, reduction of spring and baseflows or degradation of groundwater-dependent ecosystems. Most of these problems could be anticipated, mitigated, or even avoided with more active water agencies, adequate regulations and users' participation in management. Groundwater Intensive Use contains a selection of papers presented at a symposium held in December 2002 in Valencia, Spain. It constitutes a step forward in creating a greater worldwide awareness of the relevance of groundwater in water resources policy. The book presents new ideas and accounts of recent advances in technical, economic, legal, administrative and political issues. It addresses groundwater development to ecosystems sustainability, through different or complementary approaches. A wide series of case studies from North and South America, Europe, South Asia and North and Sub-Saharan Africa cover the various issues. These case studies represent countries with a wide diversity of social circumstances, from areas in which development is emerging, to communities with a long history of successful groundwater use.

This book evaluates Bangladesh's impressive economic and social progress, more often referred to as a 'development surprise'. In doing so, the book examines the gap in existing explanations of Bangladesh's development and then offers an empirically informed analysis of a range of distinctive factors, policies, and actions that have individually and collectively contributed to the progress of Bangladesh. In an inclusive way, the book covers the developmental role, relation, and impact of poverty reduction, access to finance, progress in education and social empowerment, reduction in the climatic vulnerability, and evolving sectoral growth activities in the agriculture, garments, and light industries. It also takes into account the important role of the government and NGOs in the development process, identifies bottlenecks and challenges to Bangladesh's future development path and suggests measures to overcome them. By providing an inclusive narrative to theorize Bangladesh's development, which is still missing in the public discourse, this book posits that Bangladesh per se can offer a development model to other developing countries.

This book presents a critical reassessment of theories of property rights, in response to conflicts and competition between different groups, and the state. It does so by taking an institutional political perspective to analyse the structures of property rights, with a focus on a series of case studies from Bangladesh. In doing so, the book highlights the importance of property rights for economic growth, why developing countries often fail to design property rights conducive for economic development, and the strategies required for designing an efficient structure of rights. Since property rights falls within the domain of Law and Economics, the book ventures to explain legal issues from an economic perspective, resulting in empirical analysis that comprises both legal and non-legal cases.

Volume 3 of this series of the Handbooks in Economics follows on from the previous two volumes by focusing on the fundamental concepts of agricultural economics. The first part of the volume examines the developments in human resources and technology mastery. The second part follows on by considering the processes and impact of invention and innovation in this field. This compilation includes original essays that examine past and current status of the agricultural sector in India and delineate the challenges it faces in the era of economic reforms. It highlights the issues that are beginning to raise serious policy discussions in India in view of continuing agrarian crisis and the Eleventh Five Year Plan (2007-2012). Apart from providing macro level analyses, the collection also features studies which are based on micro (field) data that reflect the realities of the Indian agrarian economy. In addition, Reforming Indian Agriculture: Towards Employment Generation and Poverty Reduction focuses on the issues of employment, poverty, food and nutrition, and reviews other aspects of development policy like fostering inter-state cooperation for optimum utilization of resources, privatization policy to mobilize funds for social sector development and pattern of
