Building on a wealth of research, this book addresses current challenges in the automotive industry and how they can be met. The authors discuss the development of the automotive industry and the problems it currently faces and consider possible solutions. They review trends in more environmental-friendly technologies, such as the use of more sustainable fuel sources and new types of modular designs with built-in recyclability. Chapters also describe new models of decentralized production, particularly the micro factory retailing (MFR) model, that provide an alternative to volume production and promise to be both more sustainable and more profitable.

The Constitution of Japan has served the country for more than half a century, creating and maintaining a stable and functional democratic system. This book innovatively interprets Japanese politics as a 'benign elite democracy' whilst demonstrating the Supreme Court's vital contribution to the political structure. In *The Supreme Court and Benign Elite Democracy in Japan*, Hiroshi Itoh presents the first empirical study of judicial decision making under Japan's Constitution. He examines the Supreme Court's records regarding the protection of civil rights and liberties, the preservation of the conformity of lower levels of laws and regulations to the Constitution, and the maintenance of the Court's relationships to the political branches. The analysis of these three aspects of constitutional litigation reveal how the Supreme Court contributes to the efficacy of constitutional democracy by keeping the system adaptable to the ever-changing environment in and around Japan.
