International Education Inquiries is a book series dedicated to realizing the global vision of Education 2030. This vision involves “ensuring inclusive and equitable quality education and promoting lifelong learning opportunities for all.” The founding editors seek to provide a forum for the diverse voices of scholars and practitioners from across the globe asking questions about transforming the vision of Education 2030 into a reality. Published chapters will reflect a variety of formats, free of methodological restrictions, involving disciplinary as well as interdisciplinary inquiries. We expect the series will be a leading forum for pioneers redefining the global discussion about the people, places and perspectives shaping Education 2030 outcomes. Education 2030 topics of interest include, but are not limited to, • Improving access to quality early childhood development, care, and pre-primary education; • Ensuring equal access for all women and men to affordable and quality education; • Increasing the number of youth and adults who have skills relevant for sustainable living and

livelihoods; • Ensuring equal access for the vulnerable, including persons with disabilities, indigenous peoples and children in vulnerable situations; • Achieving levels of literacy and numeracy required to engage in communities and employment; • Acquiring the knowledge and skills needed to promote sustainable development, including: * Human right * Gender equality, * Promotion of a culture of peace and non-violence, * Global citizenship education, * The appreciation of cultural diversity and of culture's contributions to sustainable development, • Providing safe, non-violent, inclusive and effective learning environments for all; • Recruiting, preparing, supporting, and retaining quality teachers.

Academic Paper from the year 2021 in the subject Pedagogy - School Pedagogics, , course: Accounting Technology, language: English, abstract: This study aimed at finding out the "Effect of Using Learning Management System on Academic Performance of Students on Financial Accounting in Secondary Schools in Bauchi State". Four specific objectives, four research questions and four related null hypotheses were formulated. The research design adopted was a quasi-experimental design. With a population of 10,790 secondary schools students II that are offering FA in Bauchi State. Purposive sampling technique was used in the selection of the students where the sample size was 240 students and also Purposive sampling technique was used in selecting the experimental and control groups. Mean and standard deviation were used to answer the four research questions. Independent sample t-test was used to test null hypothesis one and four while paired sample t-test was used in testing the null hypotheses two and three, all null hypotheses were tested at 0.05 level of significance. The findings of the study revealed among others, that there was a significant difference in the achievement of the students of SSS II taught FA using LMS tool compared to those taught using Conventional method. It was concluded that LMS is effective in teaching FA for better students' academic performance in secondary school. Based on this finding, it was recommended among others that teachers should intensify efforts in the use of LMS tool in teaching FA in secondary schools in Bauchi State.

The book is a must read for policy makers, academics, university administrators and post graduate research students in the broad field of education and in higher education studies in particular. The

book brings together a wealth of information regarding the imperatives of transformation in Africa's higher education systems. Not only do some of the chapters provide critical discussion about the conceptualisation of transformation, the majority of the chapters reflect on empirical evidence for transformation in diverse fields of mathematics, science, gender, the training of doctoral students and the governance and management of universities. This central theme of sustainable change and reform runs across the chapters of the book. For students, the book provides exemplars of practical research in higher education. For scholars in higher education and policy makers, specific issues for reform are identified and discussed.

The role humans play in the field of information technology continues to hold relevance even with the industry's rapid growth. People contribute heavily to the physical, cognitive, and organizational domain of computing, yet there is a lack of exploration into this phenomenon. Humanoid aspects of technology require extensive research in order to avoid marginalization and insufficient data. The Handbook of Research on the Role of Human Factors in IT Project Management is a collection of innovative research on the methods and applications of the task of human characteristics in the design and development of new technology. While highlighting topics including digitalization, risk management, and task analysis, this book is ideally designed for IT professionals, managers, support executives, project managers, managing directors, academicians, researchers, and students seeking current research on the dynamics of human influence in technological projects.

This book gathers high-quality research papers presented at the 2nd AUE international research conference, AUEIRC 2018, which was organized by the American University in the Emirates, Dubai, and held on November 13th-15th, 2018. The book is broadly divided into two main sections: Sustainability and Smart Business, and Sustainability and Creative Industries. The broad range of topics covered under these sections includes: risk assessment in agriculture, corporate social responsibility and the role of intermediaries, the impact of privatizing health insurance, political events and their effect on foreign currency exchange, the effect of sustainable HR practices on financial performance, sustainability integration in the supply chain and logistics, gender inequality in the MENA economies, the panel data model, the model of sustainable marketing in the era of Industry 4.0, micro-enterprises as a tool for combating unemployment, the impact of financial education and control on financial behavior, measuring financial and asset performance in agricultural firms, a comprehensive strategic approach to sustainability in the UAE, sustainability and project finance, HR analytics, FaD or fashion for organizational sustainability, a conceptual framework of sustainable competitive advantages, psychology of organizational sustainability, Blockchain technology and sustainability, veganism and

sustainability, institution building from an emotional intelligence perspective, sustainable concrete production using CWP, occupants' behavior and energy usage in Emirati houses, the effect of shop lighting on consumer behavior, multimedia applications in digital transformation art, integrating biomimicry principles in sustainable architecture, experimental sustainable practices in fashion education, technology-assisted student-centered learning for civil engineering, and a 10-step design process for architectural design studios. All contributions present high-quality original research work, findings and lessons learned in practical development.

In the context of the Fourth Industrial Revolution, a world of continuous alterations is glimpsed where science and technology are at the base of economic competitiveness and where innovation plays a strategic role in global competition, so that they are forced to cover a series of requirements to compete successfully in an increasingly globalized economy, including high investments in both education and research. Along these lines, the formation of mathematical learning is important because it is oriented towards the development of a set of skills with the aim of resolving situations of daily and professional lives. It focuses on the acquisition of employing the different ways of representing information in the form of models, constructions, and graphs to determine the best decision making. In this sense, it includes the mastery of the handling of numbers, measures, and structures to carry out the interpretation of operations and representations of a quantitative nature on personal and professional situations. For a society to favor innovation, the use of mathematical information is an essential condition that allows the development of creativity and analysis of information. Mathematics education plays a vital role in this development. Developing Mathematical Literacy in the Context of the Fourth Industrial Revolution studies the formation of mathematical abilities in the context of the Fourth Industrial Revolution regarding its development of both teaching and learning strategies, as well as the use of ICT and its use in the development of this discipline in students. It is important that teachers of any educational level reorient their teaching strategies and their role as educators. Therefore, the chapters discuss up-to-date and relevant information on teaching and didactic tasks in the subject of mathematics. This book highlights mathematical pedagogies, ICT in mathematics learning, teacher training, and classroom strategies for mathematics. It is intended for teachers, pedagogical advisors, business trainers, higher education staff, administrators, teacher educators, practitioners, stakeholders, researchers, academicians, and students interested in mathematical literacy in the fourth industrial revolution.
